Capstone Project: Mock Test Plan

Amplitude Experimentation

Your goal is to work through the main phases of an Amplitude **Experimentation** implementation and present your recommendations to an Amplitude team member.

Estimated time on this assignment: 3.5 hours:

- 2.5 hours to define test plans (20-30 minutes per customer scenario)
- 1 hour to record your video and submit.

Instructions

1. For each fictional customer scenario below, **define and document a test plan** following these instructions. (Or use a real-life client.) Your test plan should include:
    - A problem statement
    - A hypothesis
    - Goals and metrics
    - A primary metric and/or guardrail metrics
    - Variants
    - Allocation
    - A timeline
    - Analysis
    - Potential next steps

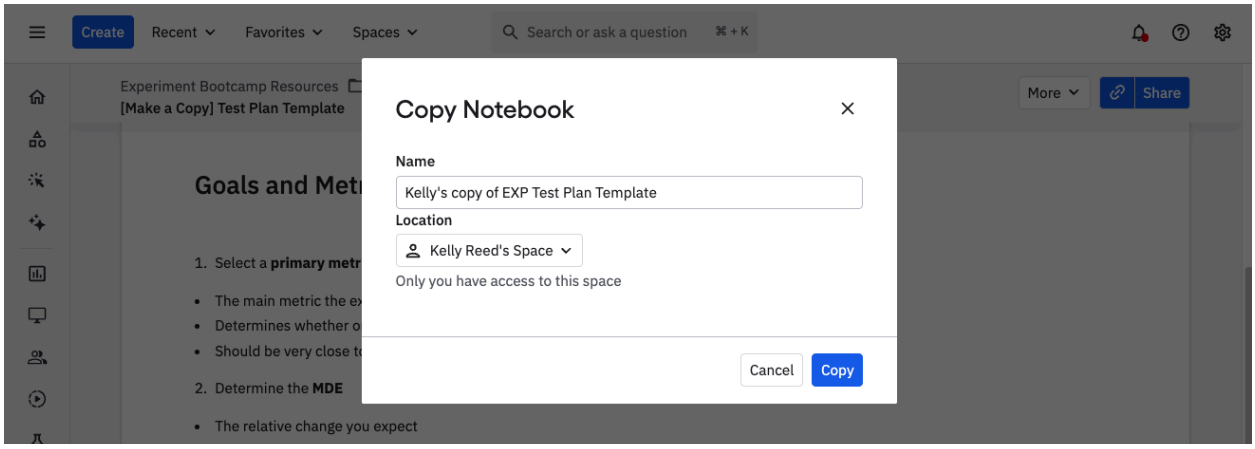

2. **Record** a brief (8-10 min) video explaining the thoughts behind each test plan. You don't need to read every word in your test plan; we will review it when you share the link. You need only take ~2-3 minutes per scenario/plan to explain your rationale.

3. **Submit** the following in the Partner Academy course. See details below on how to share your test plan.
    a. Video recording (mp4, etc.)
    b. Link to test plan for Scenario A
    c. Link to test plan for Scenario B
    d. Link to test plan for Scenario C
    e. Link to test plan for Scenario D

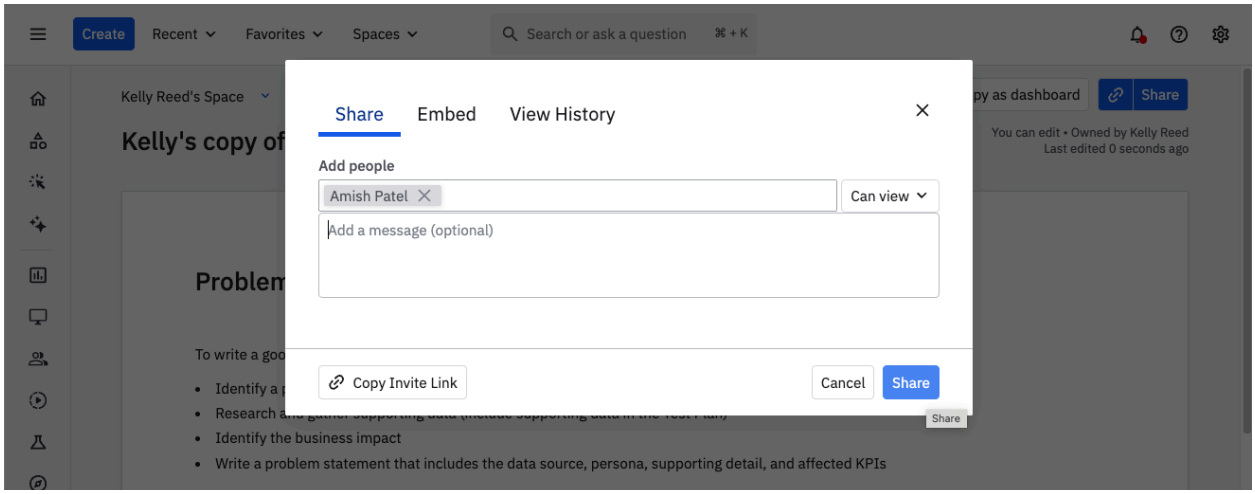

4. After submitting, **await your final score and feedback**. The reviewer may email you a rubric filled in with their notes and feedback. You will also get an automated email from the Partner Academy marking the assignment as complete or incomplete.
    - If we mark it as incomplete and ask you to resubmit, you'll need to record yourself and resubmit.
    - Note that successful completion of this learning path does not result in a badge, but our records will mark you as a skilled practitioner in implementing Experiment!

Create and Share your Test Plan

1. Make a **copy** of the Test Plan Template in the partner-training org. Add a title for each test plan scenario (“Scenario A”, “Scenario B,” etc.) **Save** it to your own Space.

2. When you’re ready to share your test plan, click **Copy Invite Link** so that you can paste the link (all 4 links) into the submission form.

Scenarios

Scenario A: AmpliCook 👩‍🍳

Category	Description
Product	• Meal-prep app: AmpliCook (a client-side application, already instrumented for Amplitude Analytics) • Mobile app for iOS and Android
Customer pain points	• While customer retention has been strong, monetization has been underperforming • Worries that increasing advertisements in-app might hurt retention
Key Business Initiatives	• Grow the user base • Increase ad revenue
Potential solution	Increase the number of ads on the home feed without harming retention.

Scenario B: AmpliPost 💌

Category	Description
Product	• Social media company: AmpliPost (a client-side application, already instrumented for Amplitude Analytics) • Desktop/web and mobile apps
Customer pain points	• Not seeing the revenue generation from unlimited plan subscriptions they think they should • Retention has been steady, but tenuous • Feeling the stress of the economy, AmpliPost needs to generate revenue quickly before other aspects of the business are impacted
Key Business Initiatives	• Increase user sign-up for unlimited plans • More importantly, increase revenue from user sign-ups
Potential solution	Replace the discounted unlimited plan with a monthly plan that has no discount applied.

Scenario C: AmpliStub 🎫

Category	Description
Product	• Event ticketing marketplace: AmpliStub (a server-side application, requiring the lowest-latency possible for evaluation) • Currently a web-only application
Customer pain points	• Lower than average purchase conversion rates compared with competitors • Negative user feedback highlighting the cumbersome process of selecting desirable, and affordable, seats for an event
Key Business Initiatives	• Increase purchase conversions while shortening the funnel • Grow market share of event ticket purchases
Potential solution	Highlight the best seats available during the booking process.

Scenario D: AmpliCare 👶

Category	Description
Product	• Babysitting app for caregivers and clients: AmpliCare (a server-side application, requiring Amplitude's identity resolution capabilities) • Currently a web-only application
Customer pain points	• Too few caregivers completely fill out their profiles, and way too few clients even start their own profile • A clunky UX design makes it difficult for many users (both caregivers and clients) to find and edit their own profile
Key Business Initiatives	• Increase completed SmartProfiles • Grow number of families that engage with caregiver
Potential solution	A new UX flow, first focusing on a new UI dropdown, should improve the existing user experience.

Scoring Rubric

Amplitude will assess a partner's competencies around implementing Amplitude Experiment according to the table below.

Criteria	Level 1 (Inadequate)	Level 2 (Below expectations)	Level 3 (Meets or exceeds expectations)	Rating
Write an effective problem statement and supporting data	Problem statement lacks most or all of the key components	Problem statement could use more research/supporting data or is missing some detail about the data source or persona	Identifies a potential problem Demonstrates research and gather supporting data Identifies the business impact Statement includes the data source, persona, supporting detail, and affected KPIs	3
Develop a useful hypothesis	Hypothesis is too broad or not solution-oriented and misses a cause, effect, and rationale	Hypothesis is somewhat solution-oriented, detailed, and contains a cause, effect, and rationale	Hypothesis is solution-oriented, detailed, and contains a clear cause, effect, and rationale	3
Define goals and metrics	Does not include any or enough clear goals and metrics	Goals and metrics include some of the following: a primary metric, MDE, secondary metrics and their MDEs, statistical settings, and guardrail metrics	Goals and metrics include all of the following: a primary metric, MDE, secondary metrics and their MDEs, statistical settings, and guardrail metrics	3
Identify and describe the variants	Does not mention variants	Does not clearly describe the desired changes and current state.	Describes the desired changes (variant) in contrast to the current experience (the control)	3
Describes Allocation	Does not clearly describe targeted users or allocation ratios		Clearly describes targeted users and allocation ratios for each group	3
Estimates timeline	No timeline mentioned	Timeline is not realistic	Provides a realistic timeline for the experiment	3
Describes next steps	No next steps mentioned	Provides a rough outline of what the next steps would be, but the potential outcomes aren't clearly addressed	Provides a rough outline of what the next steps would be after the experiment, including success, failure, or non-significant results	3
TOTAL (passing score is: 19)				**21**
