Analytics Implementation Capstone Project 2026

Overview

Your goal is to work through the main phases of an Amplitude Analytics implementation and present your recommendations to an Amplitude team member. We expect this project to take about 4–6 hours to complete.

Capstone Project examples:

- [AmpliFinancials exemplary project — link to be added after permission received from partner learners]

What You'll Deliver

This capstone has three deliverables. All three should reflect the 2026 implementation methodology.

Deliverable	What it is
Implementation Workbook	Completed Alignment tab, KPIs, Events, Event Properties, and User Properties sheets, including an AI deliverables plan for the mock scenario
Partnership Kickoff presentation	A live or recorded presentation of your kickoff as if you were presenting to the customer's executive sponsor. Use the 2026 Kickoff Deck template.
Amplitude charts	Charts built in the partner-training org that demonstrate your scoped use cases. Present these live — don't just insert screenshots in your slide deck.

Instructions

Step 1: Select a scenario.

Each scenario has a demo data set available in the partner-training org for taxonomy reference and chart-building.

- B2B SaaS (AmpliFile)
- E-commerce (AmpliStore)

You may use a real client instead of the provided scenarios (even better!). Client data will be kept confidential. No one sees your recorded presentation except the training manager and partner enablement manager, except with your written permission.

Important note on demo datasets: The data in the partner-training org for each scenario is a reference for taxonomy and chart-building — it is not meant to represent a real implementation. Do not simply replicate what's already in the org. Your workbook, taxonomy, and charts should reflect your own recommendations for the scenario, using the demo data only as a reference point.

Step 2: Identify a real app that fits this scenario.

Choose a free app you can reference and walk through (e.g. Dropbox for AmpliFile, ASOS or Zara for AmpliStore). You could also use your real client's product.

Step 3: Work through the implementation phases.

Use the 2026 methodology and the 2026 Implementation Workbook to guide your work. See Presentation Criteria/Deliverables below for detail on each phase.

Phase	Your Activity	Output for Presentation
Alignment (Week 0)	Identify the four pre-project requirements for your mock scenario. What would need to be confirmed before kickoff?	Alignment tab in the Implementation Workbook
Discovery	Determine which KPIs best fit the customer's product and value drivers. Document in the KPIs tab. Your TSM	Implementation Workbook (KPIs tab) + Partnership Kickoff presentation

Phase	Your Activity	Output for Presentation
	will provide the pre-sales architectural diagram to guide scoping.	
Technical Scoping	Build an event taxonomy aligned to your scoped KPIs, following Amplitude best practices. Include an AI deliverables plan — identify which of the five standard AI deliverables apply and when each would be delivered.	Implementation Workbook (Events, Event Properties, User Properties tabs)
Instrumentation	Recommend an ingestion method (precision tracking or hybrid) and identify relevant data sources. Review dev docs starting with https://amplitude.com/docs/get-started/get-data-in.	Slides (using the Amplitude slide template)
Enablement and Rollout	Build charts in the partner-training org that demonstrate your scoped use cases. Be prepared to walk through them live.	Charts and dashboards in the partner-training org

Step 4: Present your capstone.

Choose one of two formats:

1. **Schedule a time to present (preferred).**

- **Why:** This gives you the opportunity to answer questions and clarify in real time before the reviewer determines your score.
- **How:** Use this calendly link to book 60 minutes with your reviewer. If you can't find a good time, please reach out to partner-enablement@amplitude.com.
- **Submit your presentation deck and Implementation Workbook in the course before your meeting.**
- We typically need ~45 minutes (see below), but booking a full hour gives you buffer time.
    - 5–10 minutes: intro, questions, setup
    - 20–25 minutes: your presentation
    - 10 minutes: follow-up and discussion

2. **Submit a recording.** If it doesn't work out to schedule a meeting, you can record a 20-minute presentation and submit the video file in the Partner Academy submission area.

Step 5: Await your final score and feedback.

The reviewer will email you a completed rubric with notes and feedback. You will also receive an automated email from the Partner Academy marking the assignment as complete or incomplete.

If we mark it incomplete and ask you to resubmit, you'll need to use this calendly link to book 60 minutes with your reviewer and present in real-time for a final assessment.

Step 6: Receive your Certified Amplitude Delivery Partner badge!

After a passing presentation, you will receive an email notifying you that the Capstone Project assignment is complete and inviting you to retrieve your badge.

Presentation Criteria/Deliverables

An Amplitude team member will assess your work using the scoring rubric. Use the rubric to guide your work as you prepare.

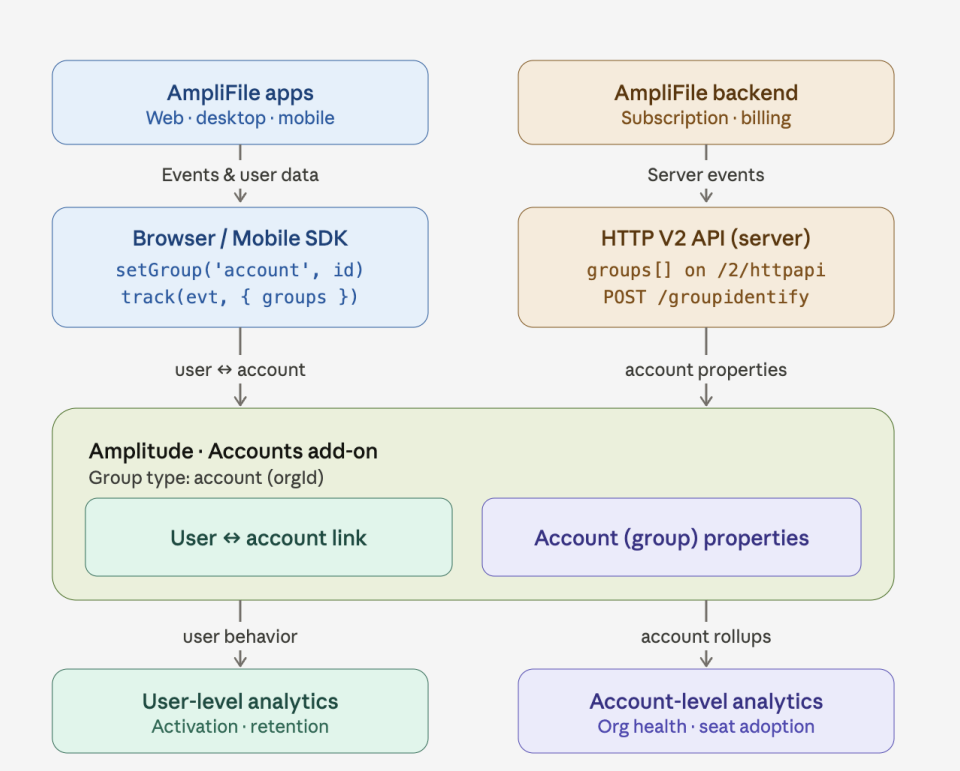

- **Determine your recommendations on:**
    - Which KPIs best fit the product, based on your understanding of the customer's value drivers and pain points
    - Taxonomy and metrics to support those KPIs
    - Preferred ingestion method (precision tracking or hybrid), including tradeoffs and data sources
    - Which of the five standard AI deliverables apply to this scenario and when each would be delivered
    - Key Amplitude features that are critical to the customer's use cases
- **Complete the Implementation Workbook, including:**
    - Alignment tab (four pre-project requirements for your mock scenario)
    - KPIs/Scope Tracker tab, including links to charts in the partner-training org
    - Events, Event Properties, and User Properties tabs
    - AI deliverables plan

- **Present your Partnership Kickoff:**
    - Use the 2026 Kickoff Deck template and present as if the reviewer is the customer's executive sponsor.
    - Have your camera on and present with the same level of professionalism you would with a real customer.
    - Be prepared for the reviewer to ask the kinds of questions an executive sponsor might ask.
- **Walk through your Amplitude charts:**
    - Present charts and dashboards live from the partner-training org — do not just insert screenshots into your slide deck.
    - Be prepared to explain how each chart supports a scoped use case.

Mock Implementation Scenarios

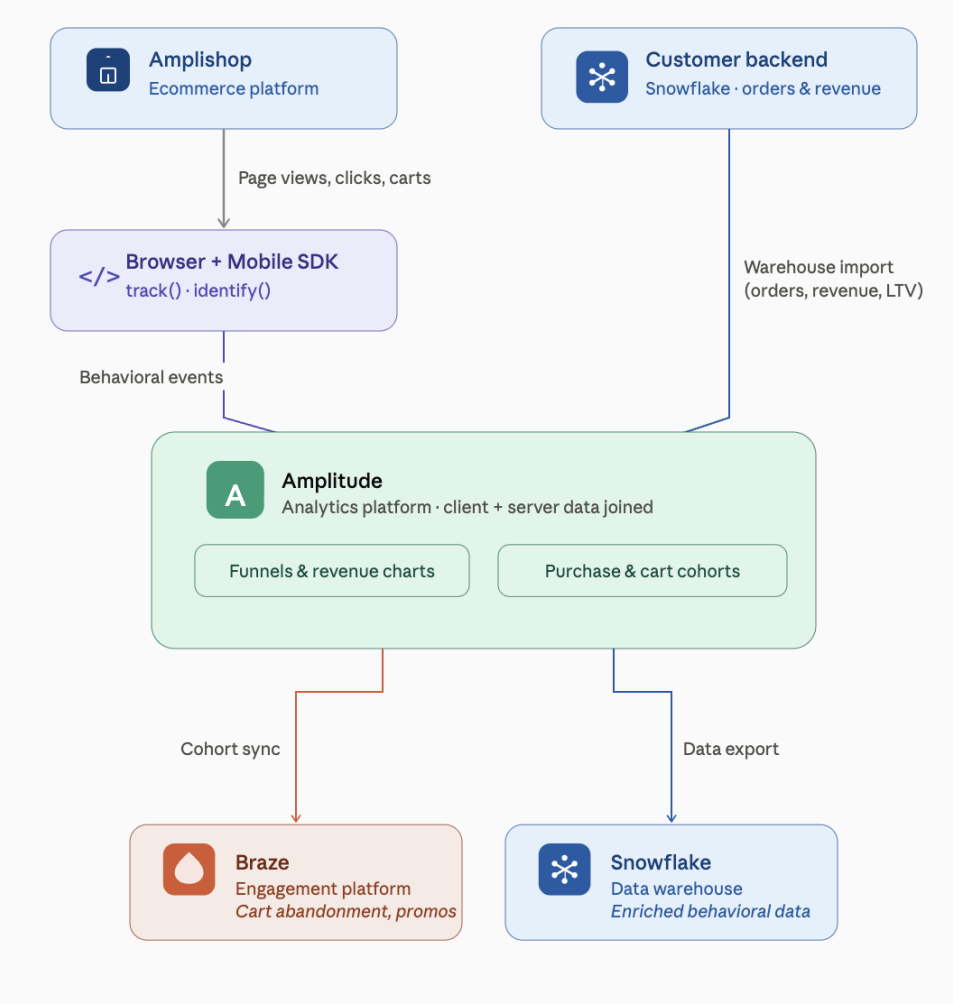

Scenario: B2B Technology (AmpliFile)

Area	Description
Product	B2B company that helps organizations and individual employees manage work documents and integrate them into their tech stack to become maximally efficient (link to AmpliFile web app). Users can complete free trials and upgrade to a subscription with additional users. Role-based platform (e.g. admin, member, viewer). Primarily web-based, with a desktop app. Mobile (iOS, Android) is an emerging product with limited flows.

Area	Description
Architecture diagram	

Scenario: E-Commerce (AmpliStore 2.0)

Area	Description
Product	D2C e-commerce retailer selling apparel and accessories across men's clothing, women's clothing, and jewelry categories (link to AmpliStore web app). Customers browse and filter by category, view product detail pages with ratings and reviews, add items to cart, and check out as a guest or registered user. Free U.S. shipping and returns on all orders. Key flows include product discovery and search, product detail and review browsing, cart and checkout, account registration and login, and order management. Web-based, with mobile browsers as a significant traffic source.

Scoring Rubric

Amplitude will assess your competencies based on the criteria below. A passing score is 17 out of 18. After a passing score, we're confident that you can own an Amplitude Analytics implementation engagement.

Criteria	Level 1 (Inadequate)	Level 2 (Below expectations)	Level 3 (Meets or exceeds expectations)	Rating	Relevant Training
A. Explain the implementation process, including the goals of each phase	Does not explain the implementation process at all, or	Explains the implementation process but is	Effectively explains the 2026 implementation phases and session goals, including	3	Implementation Overview

Criteria	Level 1 (Inadequate)	Level 2 (Below expectations)	Level 3 (Meets or exceeds expectations)	Rating	Relevant Training
and where your role plays a part	explanations contain significant errors	missing minor parts or lacks clarity	Alignment (Week 0) and the role of AI deliverables		
B. Explain the fundamental features of Amplitude Analytics and how the customer gets value from them	Does not clearly explain the features or does not explain the value at all	Effectively explains the features but not the value; or explains the value vaguely without clear explanation of the associated features	Effectively explains the features, emphasizing the value for the specific mock customer and their scoped use cases	3	Foundational and Practitioner level product training
C. [DISCOVERY] Develop KPIs following best practices *Less critical for technical roles.*	Too many or too few KPIs; not well-scoped according to best practices	KPIs are mostly well-scoped but some need improvement; may go against one or two best practices	Develops excellent KPIs following all or nearly all best practices. Shows product walkthrough.	3	Discovery
D. [TECHNICAL SCOPING] Translate customer KPIs into required event taxonomy based on Amplitude best practices	Event taxonomy has major gaps, does not align well to customer use cases, and/or does not follow the majority of best practices	Event taxonomy addresses nearly all customer use cases and follows almost all best practices, but needs some improvement	Event taxonomy is an excellent translation of customer use cases and follows best practices; AI deliverables plan is complete and correctly sequenced	3	Technical Scoping
E. [INSTRUMENTATION] Consult and discuss Amplitude data sources and destinations, including HTTP API, SDKs, Snowflake, BigQuery, and S3 *Less critical for business roles.*	Cannot effectively discuss data sources and destinations; major gaps in knowledge. Recommendations do not make sense for the chosen scenario	Discusses most but not all data sources and destinations; some minor gaps in knowledge. Recommendations generally make sense for the chosen scenario	Effectively discusses Amplitude data sources and destinations; provides recommendations that make sense for the chosen scenario, including a clear rationale for the chosen ingestion method	3	Instrumentation
F. [ENABLEMENT AND ROLLOUT] Translate customer use cases into Amplitude charts and dashboards; share Amplitude	Charts and dashboards do not support the customer use case; not enough variety of relevant charts	Translates most but not all customer use cases into charts and dashboards. Assets need only minor improvements to	Effectively translates customer use cases into Amplitude charts and dashboards; shares Amplitude	3	Enablement and Rollout

Criteria	Level 1 (Inadequate)	Level 2 (Below expectations)	Level 3 (Meets or exceeds expectations)	Rating	Relevant Training
dashboarding best practices to drive adoption		align with best practices.	dashboarding best practices		
TOTAL (passing score: 17)				**18**	

FAQs

Q: What if my team is going through the Implementation path together? Can we present the capstone project as a pair?

A: Yes, depending on your role. We typically train two kinds of roles who work together on an implementation:

1. **Business/strategy roles (e.g. Engagement Manager).** This role manages the project and maps the customer's goals.
2. **Technical roles (e.g. Solution Architect).** This role speaks to the customer's existing stack, identifies how to send data into Amplitude, and does the technical work.

If you are NOT in a technical role, we recommend you pair with a technical role (e.g. a Solution Architect) to present. We would not expect you to discuss all technical aspects of an implementation. See the highlighted criteria in the rubric for details.

If you ARE in a technical role, you may either pair with a business/strategy role or present on your own.

Adjustments for In-Person Bootcamps

- Each team will have 45 minutes to present their recommendations and field questions from other teams. We'll reserve the final 15 minutes for feedback.
- Rather than filling out the scoring rubric, the trainer will give you real-time feedback at the bootcamp. You can still use the rubric to guide your work.
- After the bootcamp, you must submit your presentation deck in the Implementation Capstone Project course. The partner enablement team will confirm with the trainer that you have passed and will then mark it Complete, triggering your badge notification email.
